BULLETIN 55: TARIFF FOR MARKET MULTIPLE-RESIDENTIAL SECTOR

DECEMBER 2001

IMPORTANT:

The AIBC transitioned to the Professional Governance Act effective February 10, 2023. **This document has not yet been updated to reflect the new legislation and updated Bylaws. The Tariff of Fees for Architectural Services suite of documents will be replaced with the Schedule of Architectural Services with Fee Guidelines. In the meantime, registrants should continue to reference the Tariff of Fees for Architectural Services, the Tariff Bulletins and Practice Guidelines to comply with Practice Standard 7.6 in the Code of Ethics and Professional Conduct.** If you have any concerns or questions, please contact practiceadvice@aibc.ca. For more information about the transition, go to aibc.ca/PGA.

Further to the *Architects Act* and Bylaws 28 and 29, the AIBC Council has endorsed an amended approach with regard to both the recommended net architectural percentage fees and the scope of basic architectural services in the “Market Multiple-Residential Sector”. This approach represents a professionally supportable departure from the familiar, traditional “Basic Services” package in Appendix I of the AIBC Tariff and carries with that a corresponding, more flexible, sliding scale of recommended fees. It was developed under the auspices of the AIBC’s Fees and Services Committee, within the Practice Board.

The chief amendments relative to Appendix I’s Basic Services are, broadly: (1) **Add**: services respecting one cycle of zoning/development permit applications across the schematic and design development phases; (2) **Delete**: bidding and negotiation phase services; (3) **Delete**: cost estimating in all phases; and (4) **Delete**: construction contract administration and payment certification.

Transitional Considerations

Existing client/architect agreements and proposals already submitted are not affected by this bulletin. New proposals of services-and-fees and new agreements are expected to be in substantial compliance with the amended Tariff (cf. Bylaw 34.16) by March 08, 2002.

Summary of Approach to the “Market-Multiple Residential Sector” Tariff

These results stem from the research and findings of a working group (representing 14 architectural firms) that met over the past two years with the objective of updating the Tariff of Fees for Architectural Services for *new* construction in the Market Multiple Residential Sector. Market Multiple Residential *renovations* were not considered. The phrase “market” suggests a developer-initiated project not involving public agency participation. Usually in this sector, the terms of the contractual relationship between the owner and the builder, who in most cases is (effectively) the same party, are neither disclosed to, nor administered by the architect. Projects characterized as being non-market, or congregate care, were outside the scope of this review and its recommendations.

Part of the approach was to develop some empirical data to ascertain what are the current acceptable fees for services in this sector. Members of the working group prepared proposals for a number of hypothetical projects based on the number of hours it would take to do the projects. This was a form of cost-check and the catalyst to clarify the basic assumptions underlying the services provided.

Cross-reference was made to the chart of services (Sequence and Scope) on the last page of the current Tariff. There are black dots beside some of the services that denote “basic” and therefore are covered by the Tariff’s percentage-fee recommendations. The origin of this list is the research and development work of the first (1986) Tariff, monitored and updated since, and kept consistent with standard client-architect agreements, construction contracts and building regulations. The consensus is that the chart has become somewhat out of step with what is currently the practice in this sector. The enclosed modified list of Basic Services was developed and endorsed for this sector.

It is notable that in this sector, contrary to the current standard basic services in the Tariff and NPP Client-Architect Agreement, Document 6, one cycle of the rezoning and development permit process is commonly included in basic services. On the other hand, tendering is not usually included, and neither are any services related to progress certificates or quantification of the value of the work. While it is recognized that the architect needs to approve changes to the work, and to be aware of relevant communications, the change order procedure does not necessarily require the organizational framework, in this case, as it does for other sectors.

A review of construction documents was done and a list of necessary Construction Documents (including working drawings and specifications) was developed. Since tendering and contract administration are not included in basic services, the specifications in this sector consist mostly of products, performance standards, assembly illustrations and schedules to satisfy code compliance (i.e. the so-called “technical” and quality assurance aspects).

The number of variables to consider in providing services during construction makes it extremely difficult to be precise about the fees. The reviews generically identified in the current Tariff’s Basic Services chart were expanded and a sequential checklist of field reviews was prepared.

To translate the estimated hours for our hypothetical sample projects into a fee an hourly rate of \$85.00 was used. This was assumed to be a blended rate. It was noted that the beginning and ending of the project take more “principal’s” time than do the intermediate phases.

Specific Amendments to the AIBC Tariff of Fees for Architectural Services:

1. Basic Services: Add (as Appendix II) the enclosed Sequence and Scope of Services Chart for Market Multiple Residential Sector Projects, found on this Bulletin’s last page. (Note: for ease of

comparison, the body of this Bulletin shows both the current Chart 1, and Chart 2 for this sector, side-by-side in newly matching formats).

2. Net percentage Fee Scale, page 27: Delete Table 9 (A) New Construction Market and replace with the attached graph for new construction (note the list of assumptions in applying the graph). Delete Table 9 (A) Renovations Market and replace with N/A. Note that 3.6.5 Renovations to Existing Buildings (versus New Construction) provides a fair approach to assessing fees for additions and renovations.
3. To 3.1 Alternate Methods of Establishing Fees: Add the following: “For Services during Construction - i.e. after Building Permit, for Market Multiple Residential Projects, due to the number and the potential impact of the variables on the scope of services and the number and duration of field trips, it is recommended that these services be performed a time-basis (see 3.4), hourly or per diem. The Tariff should be used as a budget reference. It should be kept in mind that the timing and frequency of field reviews must be at the discretion of the architect. It would be prudent for the architect and the client to preview the type of field observations the architect must make. If the extent of field services exceeds what was anticipated, the architect should advise the client of this at an early stage to ensure proper services and to avoid conflicts regarding fees.” (Notwithstanding the above, the percentage-fee scales do account for reasonably anticipated construction-phase services.)
4. To 3.2 Allocation of Total Basic Fee to Phases of Service: Add the following: “For Multiple Residential projects: Services for Schematic and Design Development phases together constitute about 40 to 45% of the fee and Contract Documentation constitutes about 40 to 45% of the fee. The fees for Services During Construction would range from 10 to 20% of the fee.”
5. Amend 3.5.1 Operating Assumptions by adding: “For Market Multiple Residential projects refer to the Sequence and Scope of Services for Market Multiple Residential Projects in the corresponding Appendix II.”

The AIBC does not provide legal, accounting or insurance advice and expressly disclaims any responsibility for any errors or omissions with respect to legal, accounting or insurance matters that may be contained herein. Readers of AIBC documents are advised to consult their own legal, accounting or insurance representatives to obtain suitable professional advice in those regards.

Market-Multiple Residential: New Construction

Recommended Net Percentage Fee for Basic Architectural Services in this Sector

Note: The following assumptions apply to the use of this graph.

Client

These projects would be for private sector clients who have experience with this building type and who will have a reasonable reaction to the bureaucratic requirements that arise. Other variables would affect the fee upward, e.g. a novice developer; an institutional or bureaucratic management style; an argumentative approach, and a client without knowledgeable in-house field personnel.

Authority Having Jurisdiction (Municipality, Regional District, et al)

The user of this graph should be cautioned that the fees are for projects in a municipality familiar to the architect, and historically non-confrontational to the architect's proposals. The architect should consider the effort required for a project in a less familiar or an unreceptive municipality that would require an upward adjustment factor to account for the differences in bureaucracy, notwithstanding and in addition to travel time.

Site

The site is flat without significant environmental, geotechnical, or urban design issues. Complicating conditions would require appropriate fee-increase adjustments.

Construction Cost

The percentage-based fees are calculated against a Construction Cost which excludes the full, unrebated federal "Goods and Services Tax" (GST) or other, comparable value-added tax.
